Subject Index

A—

B
Beef cattle: Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189.
Body condition: Relationship between live weight and body condition score in Irish Holstein-Friesian dairy cows, 141.
Bread: Prediction of rye dough behaviour and bread quality using response surface methodology, 239.
Breeding: Gains in dry matter yield and herbage quality from breeding perennial ryegrass, 23; Ryegrass breeding − balancing trait priorities, 31; A theoretical and practical analysis of the optimum breeding system for perennial ryegrass, 47.
Breed(s): Comparative performance and economic appraisal of Holstein-Friesian, Jersey and Jersey × Holstein-Friesian cows under seasonal pasture-based management, 123.
Broiler chickens: A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

C
Calf (calves): Effect of post-weaning management practices on physiological and immunological responses of weaned beef calves, 161.
Cattle: Effect of post-weaning management practices on physiological and immunological responses of weaned beef calves, 161; Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189.
Chicken(s): A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

D
Dairy cows: Comparative performance and economic appraisal of Holstein-Friesian, Jersey and Jersey × Holstein-Friesian cows under seasonal pasture-based management, 123; Relationship between live weight and body condition score in Irish Holstein-Friesian dairy cows, 141; Urine patch distribution under dairy grazing at three stocking rates in Ireland, 149; Analysis and evaluation of the teat-end vacuum condition in different automatic milking systems, 209.
Diet: Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189; A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

E
Economics: Capturing the economic benefit of *Lolium perenne* cultivar performance, 83; The economics of reseeding on a dairy farm, 113; Comparative performance and economic appraisal of Holstein-Friesian, Jersey and Jersey × Holstein-Friesian cows under seasonal pasture-based management, 123.
Enzyme(s): A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

F—

G
Genetics: Gains in dry matter yield and herbage quality from breeding perennial ryegrass, 23; Ryegrass breeding − balancing trait priorities, 31; A theoretical and practical analysis of the optimum breeding system for perennial ryegrass, 47; A review of perennial ryegrass variety evaluation in Ireland, 65; Comparative performance and economic appraisal of Holstein-Friesian, Jersey and Jersey × Holstein-Friesian cows under seasonal pasture-based management, 123.
Grass silage: Factors influencing the conservation characteristics of baled and precision-chop grass silages, 175; Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189.

Grassland: Requirements of future grass-based ruminant production systems in Ireland, 1; The economics of reseeding on a dairy farm, 113; Urine patch distribution under dairy grazing at three stocking rates in Ireland, 149.

Grazing: Requirements of future grass-based ruminant production systems in Ireland, 1; Urine patch distribution under dairy grazing at three stocking rates in Ireland, 149.

H
Heavy metal(s): Essential elements and heavy metal concentrations in a small area of the Castlecomer Plateau, Co. Kilkenny, Ireland: Implications for animal performance, 223.

I
Intake: Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189; A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

K—

L
Live weight: Relationship between live weight and body condition score in Irish Holstein-Friesian dairy cows, 141; Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189.

Lolium perenne L.: Gains in dry matter yield and herbage quality from breeding perennial ryegrass, 23; Ryegrass breeding – balancing trait priorities, 31; A theoretical and practical analysis of the optimum breeding system for perennial ryegrass, 47; A review of perennial ryegrass variety evaluation in Ireland, 65; Capturing the economic benefit of Lolium perenne cultivar performance, 83; Studies into the dynamics of perennial ryegrass (Lolium perenne L.) seed mixtures, 99.

M
Maize: Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189.

Milking machine(s): Analysis and evaluation of the teat-end vacuum condition in different automatic milking systems, 209.

Milking systems: Analysis and evaluation of the teat-end vacuum condition in different automatic milking systems, 209.

Nutrition: Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or ad libitum concentrate, 189; Essential elements and heavy metal concentrations in a small area of the Castlecomer Plateau, Co. Kilkenny, Ireland: Implications for animal performance, 223; A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

Q—

P
Perennial ryegrass: Gains in dry matter yield and herbage quality from breeding perennial ryegrass, 23; Ryegrass breeding – balancing trait priorities, 31; A theoretical and practical analysis of the optimum breeding system for perennial ryegrass, 47; A review of perennial ryegrass variety evaluation in Ireland, 65; Capturing the economic benefit of Lolium perenne cultivar performance, 83; Studies into the dynamics of perennial ryegrass (Lolium perenne L.) seed mixtures, 99.

Probiotics: A note on the effects of a combination of an enzyme complex and probiotic in the diet on performance of broiler chickens, 249.

R
Reseeding: The economics of reseeding on a dairy farm, 113.

Ruminant(s): Requirements of future grass-based ruminant production systems in Ireland, 1.

Ryegrass: Gains in dry matter yield and herbage quality from breeding perennial ryegrass, 23; Ryegrass breeding – balancing trait priorities, 31; A theoretical and practical analysis of the optimum breeding system for perennial ryegrass, 47; A review of perennial ryegrass variety evaluation in Ireland, 65; Capturing the economic benefit of Lolium perenne cultivar performance, 83; Studies into the dynamics of perennial ryegrass (Lolium perenne L.) seed mixtures, 99.
S
Silage: Factors influencing the conservation characteristics of baled and precision-chop grass silages, 175; Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or *ad libitum* concentrate, 189.
Soil(s): Essential elements and heavy metal concentrations in a small area of the Castlecomer Plateau, Co. Kilkenny, Ireland: Implications for animal performance, 223.
Stocking rate(s): Urine patch distribution under dairy grazing at three stocking rates in Ireland, 149.

T
Triticale: Intake, growth and feed conversion efficiency of finishing beef cattle offered diets based on triticale, maize or grass silages, or *ad libitum* concentrate, 189.

U
Urine: Urine patch distribution under dairy grazing at three stocking rates in Ireland, 149.
