

## Johnstown Castle Winter Milk Herd- Weekly Management Notes - 11/09/17

- All of the autumn herd are Dry (but not for long, I expect we'll have a few calves by the weekend, about a week before their due date. The autumn herd are now grazing covers of 1600-1800kgs/dm/ha. As there is no milking group they have access to very good grass & we need to graze them tight in order to keep an eye on B.C.S. Based on E.C.D and physical signs, cows will move into the calving paddock ~ 7-10 days pre calving.
- We still have some silage to take out – paddocks we skipped over two weeks ago, but due to the very mixed weather we had little opportunity to take these out. Grass supply is not a problem & with the good growth rates we're likely to still run into covers higher than we'd like. We will measure weekly & decide then on whether to take out more surplus silage or to chance letting it build. (we would prefer not to be taking out silage at this stage of the year, but we don't want to have pre-grazing covers greater than 1900kgs for the freshly calved cows either)
- Rainfall for the past week was about normal at 22mm, we've had 70mm so far for the month of September, ground conditions are ok, with good drying in between the downpours. We could do with a good settled spell for the remainder of September
- Replacements weighed again this week, we need to keep an eye on the autumn maiden heifers, their about 30kgs behind last year's group (there are more younger heifers this year). This group were probably pushed a bit harder this year, due to TB restriction, I still think with good grass they'll be on target come December.

	<b><i>This week (11/09/17)</i></b>	<b>Autumn Calving Herd</b>	<b>Spring Calving Herd</b>
<b>Production</b>	% of Herd Milking	0%	100%
	Milk Kg		18.4
	Fat %		4.51
