

# Salad Potato Technology Project

---

## *Crop Walk September 2015 (Workshop 4)*

Workshop 4 will look at: importance of understanding customer specifications, importance of skin set, understanding risk of skin disease and pest damage, and storage issues such as cooling, ventilation, differences between sorting ware and salad potatoes, sprout management, etc.

## **Teagasc, Bord Bia, IFA and Salad Potato Technology Project**

### **Context**

The imports of salad potatoes are estimated at 20,000 tonnes per year. It is estimated up to 15 Irish growers have been supplying approx. 10-15% to this market each year. There is huge scope to increase the volume of home produced salad potatoes to the domestic market. Increasing the area grown to salad potatoes can thereby displace imported salad potatoes and will also help potato growers diversify existing ware production into a premium market. The production of salad potatoes requires considerable skill and a change of practice if changing from traditional ware potato production. Grower diversification into salad production cannot be taken likely as the supply chain (from seed supply, agronomy, to final sale) need to be secure.

Coping with an expansion of salad potato will be challenging. Potato farmers will require the knowledge and support to enable them to make the necessary changes for a profitable and sustainable future. It is within this context this initiative between Teagasc, Bord Bia, IFA and industry has been agreed.

### **Purpose**

The overall purpose of the program is to increase the level of information to existing growers and ultimately increase the quantity of salad potatoes grown in Ireland. This will involve equipping the industry with the necessary skills and knowledge to sustainably develop their potato enterprises

### **Objective**

#### **The program has five objectives**

- Improve existing growers knowledge in all areas (agronomy/storage) of growing salad potatoes
- Increase the total quantity of salad potatoes grown in Ireland
- Grow the market for indigenously grown salad potatoes to keep pace with increased production
- Increase the number of growers supply salad potatoes
- Upskill the industry on storage of salad potatoes
- Leave a legacy of information for growers to use after the program is finished

### **Methodology**

1. Run a Technology transfer project over the next 3 years
2. Regularly meet existing growers through each season at critical times
3. Develop markets and solutions to prolong window where salad potatoes are delivered
4. Provide up to date agronomy notes for growers at each meeting , building to a substantial volume of information over the three years which can be used in the future

## Agenda for September Workshop

September	<ul style="list-style-type: none"> <li>• <b>Session 1</b> Quality of demo varieties               <ol style="list-style-type: none"> <li>i. Samples of all salad varieties grown in the demo (boxes and graded)</li> <li>ii. Skin finish, dry matter, potential storage issues, how long could it store for?</li> </ol> </li> <li>• <b>Session 2</b> Storage               <ol style="list-style-type: none"> <li>i. Sutton bridge storage questionnaire for all attendees to fill (at the start)</li> <li>ii. Back to basics re storage –                   <ul style="list-style-type: none"> <li>○ Long term storage of potato (the basics)</li> <li>○ Potato condition going in, drying, cooling, hold temp, etc.</li> <li>○ Differences for salad potatoes</li> <li>○ Small spuds re ventilation (moisture loss)</li> </ul> </li> <li>iii. Store, boxes, filling (suitability for salads v ware)</li> <li>iv. store management and box layout,</li> <li>v. Sprout management – storing salad potatoes until February-March?</li> </ol> </li> <li>• <b>Session 3</b> Economics               <ol style="list-style-type: none"> <li>i. Economics of salad potato production (assessment of costs and potential profitability)</li> </ol> </li> </ul>
<b>Topics discussed at previous Workshops</b>	
July	<ul style="list-style-type: none"> <li>• <i>importance of understanding customer specifications,</i></li> <li>• <i>deciding when to harvest,</i></li> <li>• <i>desiccation techniques,</i></li> <li>• <i>yield assessment digs,</i></li> <li>• <i>importance of skin set,</i></li> <li>• <i>understanding risk of skin disease and pest damage, harvester settings,</i></li> <li>• <i>irrigation to protect skin quality,</i></li> <li>• <i>management for long term storage</i></li> </ul>
May	<ul style="list-style-type: none"> <li>• <i>Review of varieties</i></li> <li>• <i>Emergence,</i></li> <li>• <i>Spacing</i></li> <li>• <i>Impact of cultivation</i></li> <li>• <i>Canopy growth</i></li> <li>• <i>Root and stem development</i></li> <li>• <i>Weed control</i></li> <li>• <i>Irrigation planning and techniques</i></li> <li>• <i>Blight control</i></li> <li>• <i>Foliar nutrition (phosphate for seed crops)</i></li> </ul>
April	<ul style="list-style-type: none"> <li>• <i>Varieties for the market</i></li> <li>• <i>Variety specifications</i></li> <li>• <i>costs of production</i></li> <li>• <i>Production issues</i></li> <li>• <i>Field history</i></li> <li>• <i>Soil type and soil structure</i></li> <li>• <i>Soil analysis</i></li> <li>• <i>Seed quality</i></li> <li>• <i>Seed rate and requirement for uniformity</i></li> <li>• <i>target stem numbers</i></li> <li>• <i>Fertiliser requirements</i></li> <li>• <i>Seed tuber fungicide treatment if required</i></li> <li>• <i>Machinery for planting</i></li> <li>• <i>Other areas of interest</i></li> </ul>

## Demonstration site (John Stafford, Wexford)

<b>Field name</b>	<b>J. Murphy's</b>	
<b>History before planting</b>	<ul style="list-style-type: none"> <li>• Round-up which cleaned the stubble before we ploughed it.</li> <li>• Rotavate on the flat while bed forming, followed by destoning (Grimme CS1500), followed by planting.</li> <li>• Planting equipment</li> <li>• Grimme six row cup planter and also a structural two row belt planter.</li> <li>• Fertiliser placement unit which applies fertiliser on top of the bed ahead of the planter unit.</li> <li>• Potash broadcast the on the ploughed ground</li> </ul>	
<b>Soil type</b>	Fine Clay with percentage of sand, on a river bank	
<b>Soil analysis</b>		
<b>pH</b>	6.0	
<b>P</b>	3.8 (Low index 2)	
<b>K</b>	237 (high index 4)	
<b>Mg</b>	110 (index	
<b>Manure applied?</b>	No	
<b>Fertiliser used</b>	N= 68kg/ha (54units/ac) (54 units/ac in bed) P= 115 kg/ha (92units/ac) (60 units/ac in the bed) K= 90 kg/ha (72units/ha)	
<b>Field history</b>		
<b>Last year potatoes grown?</b>	2011	
<b>Previous crop?</b>	Spring Barley	
<b>Any groundkeepers?</b>	No	
<b>PCN? FLN?</b>	Not tested	
<b>Stone content</b>	Very low stone content	
<b>Bed width</b>	72 inches	
<b>Irrigation available?</b>	Yes	
<b>De-stoner webs spacing</b>	30mm Space	
<b>Harvester webs spacing</b>	30mm Space	
<b>Planting date</b>	April 22 <sup>nd</sup>	
<b>Varieties and seed classification</b>	Maris Peer (35/55mm) Jester (25/35mm) Charlotte (35/45mm) Jazzy (35/45mm) Imagine	EC2 Class SE EC2 Class E EC2 Class SE EC3 Class A EC2
<b>Market size requirement</b>	25-45mm	
<b>Seed tuber count (tubers/50kg)</b>	Maris Peer (35/55mm) Jester (25/35mm) Charlotte (35/45mm) Jazzy (35/45mm)	940 per 50Kg 2650 per 50Kg 810 per 50Kg 910 per 50Kg
<b>Planned seed tuber spacing (inches) for 300,000stems/ac</b>	Maris Peer (1.28ac) Jester (0.67 ac) Charlotte (0.625ac) Jazzy (0.196ac) Imagine (2 rows)	4.4 3 5.7 6.5 4.4

<b>Seed tuber fungicide treatment</b>	All treated with Imazalil/Thiabendazole	All varieties also receive Monceran 1.5 kg/ton
<b>Weed control</b>	May 21	Retro 2L/ ha Defy 3 L/ha Shotput 0.75 kg/ha Activator 0.2 L/ha
<b>Irrigation</b>	8 <sup>th</sup> June 12 <sup>th</sup> June 16 <sup>th</sup> June (enough rain fell thereafter)	All applications 25 mm
<b>Blight and insecticide applications</b>  (started at roseate stage 2")	3 <sup>rd</sup> June  10 <sup>th</sup> June  17 <sup>th</sup> June  23 <sup>rd</sup> June  30 <sup>th</sup> June  8 <sup>th</sup> July  14 <sup>th</sup> July  22 <sup>nd</sup> July  25 <sup>th</sup> July  29 <sup>th</sup> July  6 <sup>th</sup> August	Volley 0.4 L/ha  Infinito 1.6 L/ha MagPhos 5 L/ha  Infinito 1.6 L/ha MagPhos 5 L/ha Mancozin 1 L/ha Infinito 1.6 L/ha Sparviero 75 ml/ha (insecticide) Mancozin 1 L/ha MagPhos 5 L/ha  Revus 0.6 L/ha Dimethox 0.7 L/ha Mancozin 1 L/ha  Revus 0.6 L/ha Option 0.1875 kg/ha Plenum 0.3 Kg/ha (insecticide)  Ranman 0.6L/ha Sparviero 75ml/ha  Consento 2L/ha Plenum 0.3Kg/ha  Volley 0.2L/ha  Volley 0.4L/ha  Ranman 0.5L/ha
