An insight into the Californian soft fruit industry

Dr. Eamonn Kehoe, Teagasc, Kinsealy Research Centre, Malahide Road, Dublin 17.
Oxnard 34.19°

Wexford 52.29°
FRESNO, Calif. — President Obama arrived in the heart of California’s parched farmland on Friday afternoon to offer tens of millions of dollars in federal assistance to the state, where the lack of rain and snow this winter has led to the severest drought in its modern history.

Meeting with farmers and ranchers around Fresno — where electronic signs along highways flash entreatingly to drivers, “Serious drought. Help save water” — Mr. Obama pledged $183 million from existing federal funds for drought relief programs in California. Though the announcement won cautious support in this region, Mr. Obama also pressed ahead with the more difficult task of enlisting rural America in his campaign on climate change by linking it to the drought.

The president was accompanied on his tour by the state’s top Democrats, a show of solidarity that underscored the emerging partisan battle over the management of the drought in the nation’s most populous state and the source of half of the country’s fruits and vegetables.
Welcome to Plant Sciences, Inc.

About Plant Sciences

Plant Sciences has a history of innovation and leadership, dating back to 1978. We have been at the forefront of developing sustainable agricultural practices and technologies.

PB Solar

PB Solar is a leader in the field of solar energy solutions. We offer a range of solar products and services to help businesses and individuals transition to renewable energy.

Lifesong for Orphans Partnership

Plant Sciences has partnered with Lifesong for Orphans, an organization dedicated to providinglasting solutions to the challenges faced by orphans and families in need. Our partnership focuses on providing sustainable livelihoods and educational opportunities.

Announcements

Plant Sciences released our 2013 Variety Catalog.

PSI Transactions: A snapshot of PSI's international transactions & projects.

The newest everbearer release is ideal for substrate production systems, though very adaptable to soil production. Triumph is setting new records of commercial production and meeting very specific consumer preferences in the European markets the variety is adapted to.

One of two new selections recently released by the Berry Genetics strawberry breeding program. This cultivar is selected specifically to meet consumer preferences in Northern Europe and will provide PSI's partners with the competitive advantage they require in today's marketplace; a very important ongoing goal of the PSI breeding programs.
