**A contact herbicide for selective use in cabbages, Brussels sprout and bulb onions.**

Wettable powder (WP) formulation containing 45% w/w pyridate.

**FOR USE ONLY AS AN AGRICULTURAL HERBICIDE. FOR PROFESSIONAL USE ONLY**

Production date / Batch number: see packaging

Specific weeds controlled: Black nightshade, cleavers, fat hen.

To protect aquatic organisms respect an unsprayed buffer zone of 5m to surface water bodies.

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE.

## Risk and Safety Information

Lentagran® WP - Wettable powder (WP) containing 45% w/w pyridate.

May cause an allergic skin reaction.

Very toxic to aquatic life with long lasting effects.

Contaminated work clothing should not be allowed out of the workplace.

Avoid release to the environment.

*If ON SKIN: Wash with soap and water. If skin irritation or a rash occurs: Get medical advice/attention.*

Collect spillage.

Dispose of contents/container to a licensed hazardous waste disposal contractor or collection site except for empty clean triple-rinsed containers which can be disposed of as non-hazardous waste.

Do not contaminate water with the product or its container; Do not clean application equipment near surface water. Avoid contamination via drains from farmyards and roads.

To avoid risks to human health and the environment, comply with the instructions for use.

SAFETY PRECAUTIONS

Operator protection
ENGINEERING CONTROL OF OPERATOR EXPOSURE must be used where reasonably practicable in addition to the following personal protective equipment:
- WEAR PROTECTIVE GLOVES when handling contaminated surfaces.
- WASH CONCENTRATE from skin or eyes immediately.
- WASH HANDS AND EXPOSED SKIN before meals and after work.
- WHEN USING DO NOT EAT, DRINK OR SMOKE.

Environmental protection
- Do not contaminate water with the product or its container. Do not clean application equipment near surface water and avoid contamination via drains from farmyards and roads.
- Extreme care must be taken to avoid spray drift onto non-crop plants outside the target area.
- To protect aquatic organisms respect an unsprayed buffer zone of 5m to surface water bodies.

Storage and disposal
- KEEP OUT OF REACH OF CHILDREN.
- KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFFS.
- KEEP IN ORIGINAL CONTAINER, tightly closed, in a safe place.

Water-soluble bag precautions and labelling
- DO NOT TOUCH WATER SOLUBLE BAG WITH WET HANDS OR GLOVES.
- PLACE WHOLE BAG DIRECTLY INTO SPRAY TANK.
- DO NOT STORE HALF BAGS OR DAMAGED BAGS.
- USE IMMEDIATELY.
- ENSURE ALL OTHER LABEL INSTRUCTIONS ARE FOLLOWED.

Storage
LENTAGRAN WP should be stored for at least 24 hours at room temperature (18-20°C) before use.

Restrictions
- Apply only on dry crops
- The temperature of the diluted spray solution and air should be above 10°C at spraying
- Overdosing (spray boom overlap) and spray drift should be avoided

Anti-resistance strategy
Weed control may be reduced if resistant strains develop to pyridate. To prevent the development of resistance, Lentagran WP should not be used as a solon the sole method of control. Considering should be given to alternation of product with a different mode of action from a different chemical HRAC group with satisfactory efficacy against the targeted weed species or cultivated or belonging to HRAC Group C3.

FOLLOWING CROPS
There is no restriction on following crops to the application of LENTAGRAN WP, even in crop failure situations. Soil cultivation is not necessary.

DIRECTIONS FOR USE
LENTAGRAN WP is a contact herbicide with no residual activity. Application should be made when all weeds have emerged, provided that the crop is within the correct stage of growth and not under stress. Best results are obtained from a fine spray applied whilst the weeds are small and actively growing and before the crop forms a canopy of foliage over the weeds. When the crop canopy is protecting the weeds, spray volume should be increased.

Weeds Controlled
LENTAGRAN WP can be used to control the following weeds: black nightshade, cleavers and fat hen.

For optimum control the weeds should be treated at the cotyledon to 4 leaf stage and when the ambient daytime temperature is above 10°C. Do not apply during periods when night temperatures are consistently below 2°C or when day temperatures exceed 18°C.

Application
Cabbage and Brussels Sprouts
Timing: Apply LENTAGRAN WP once the crop has fully expanded leaves. If the crop is transplanted allow 2 weeks after planting for plants to establish. Applications should be made before the 6 leaf stage (GS 16 BBCH). A crystal violet test should be carried out to ensure the leaves have a good wax layer before applying LENTAGRAN WP. There may be some yellowing of the older leaves but this effect is no longer visible after 8 weeks and has no influence on yield or time of harvest.

Do not apply LENTAGRAN WP in mixture with any product that can cause de-waxing of the crop leaves. Do not apply LENTAGRAN WP within 14 days of any product that causes de-waxing of the crop leaves.

Optimum weed control will result if LENTAGRAN WP is applied when all the weeds have emerged. In view of the wide range of cabbage cultivars available, it is recommended that selectivity trials are conducted locally before applying LENTAGRAN WP, especially on varieties that are newly introduced. Under unfavourable conditions LENTAGRAN WP may lead to crop damage when applied at 2-4 leaf stage (cabbage) especially when the crop is not sufficiently rooted after transplantation. The latest application timing is before the 6 leaf stage.

Bulb onion
Timing: Apply LENTAGRAN WP at 2 kg/ha.

PREPARATION OF THE SPRAY SOLUTION
LENTAGRAN WP should not be creamed in a bucket but added directly to the spray tank. Half fill the spray tank with clean water, add LENTAGRAN WP and selectivity trials are conducted locally before applying LENTAGRAN WP. There may be some yellowing of the older leaves, but this effect is no longer visible after 8 weeks and has no influence on yield or time of harvest.

Water volume
Apply in no less than 200 litres water per hectare up to 400 litres of water the spray spray at a minimum of 2 bar as the spray coverage is essential for effective weed control.

Spray Nozzles
A FIME quality spray (as defined by BCPC) is preferred for application of LENTAGRAN WP. Choice of nozzle should be based on consulting manufacturer’s literature and selecting a nozzle that produces a fine quality spray at an output consistent with the nozzle spacing on the boom, chosen forward speed, required spray volume and operating in the range 2-3 bar.

WARRANTY: The seller makes no warranty, expressed or implied, concerning the use of the product other than as indicated on the label. The purchaser and user shall assume all risk associated with the use and/or handling and/or storage of the product if this use and/or handling and/or storage are carried out contrary to label instructions.

DAMAGES: Buyer’s or user’s exclusive remedy for damages for breach of warranty or negligence shall be limited to direct damage not exceeding the purchase price of the product, and shall not include incidental or consequential damages.
