EXTENSION OF AUTHORISATION FOR MINOR USES (EAMU)

INSTRUCTIONS FOR USE

PPP: Fandango (PCS No. 03787)

CROPS:
[Outdoor grown: Onion and Shallot]

For this EAMU the following crop definitions apply:

Onions include Bulb onions grown from seed or sets only. This approval does not include salad onion.

This approval provides for the use of the product Fandango (PCS No. 03787) in respect of, the crops and situations as listed above, which are extra to those specified on the product label.

The conditions of application outlined below are statutory. They must be complied with when availing of this extension for minor uses.

The instructions provided in this extension for minor uses must be used in conjunction with information provided on the approved product label.

Failure to abide by the conditions of approval specified below or on the product label may constitute a breach of the product approval.

Reference Date: 04.09.19. [Includes latest changes. This version should be used until updated]

Product name: Fandango
Active Substance: Fluoxastrobin + Prothioconazole
Formulation: 100g/L + 100g/L EC
Authorisation Holder: Bayer CropScience Limited
Marketing Company: Bayer CropScience Limited
PCS No: 03787
User type/Function: Professional Use Only / Fungicide.

There is limited evidence of crop safety and/or product efficacy available for this extension of authorisation for minor uses and the commercial risk of using this product on the crops/situations listed in this document is borne entirely by the grower.
**Application:**

<table>
<thead>
<tr>
<th>Crop</th>
<th>Max. individual dose</th>
<th>Max. number of applications</th>
<th>Max. total dose</th>
<th>Minimum interval between applications</th>
<th>Latest time of application</th>
<th>Target</th>
</tr>
</thead>
<tbody>
<tr>
<td>Outdoor grown Onion &amp; Shallot</td>
<td>1.25 l/ha</td>
<td>4* (See other specific restrictions)</td>
<td>5.0 l/ha</td>
<td>Up to 10% of leaves bent over [GS47]</td>
<td></td>
<td>Downy mildew</td>
</tr>
</tbody>
</table>

**Other specific restrictions:**

1. To avoid risks to human health & the environment comply with the terms of this approval in conjunction with the directions for use on the product label.
2. For any individual crop the maximum total dose refers to the total dose of any product containing the same active ingredient.
3. Do not apply any more than 2 consecutive applications of Fandango.
4. Application by tractor mounted/trailed sprayer only. Do not apply by hand held equipment.
5. Treated crops must be mechanically harvested.
6. Post application, do not allow unprotected persons to enter treated areas until the crop is completely dry & has been well ventilated.
7. For environmental information refer to the product label but specifically: To protect aquatic organisms respect an unsprayed buffer zone of 5m to surface water bodies from tractor mounted/trailed sprayers. Aim spray away from water. Growers may be eligible to reduce the buffer zone under the PRCD STRIPE Scheme.
8. This approval extends to professional use only.
9. For operator protection refer to the product label in conjunction with the specific restrictions above.
10. Adverse effects: Approval holders must immediately submit any new information on the potentially dangerous effects of a product or residues of an active substance contained in a product, on human or animal health, or the environment.
Advisory information:

This approval relates to the use of Fandango as a horticultural fungicide for the control of downy mildew (Peronospora destructor) and some reduction of bacterial rots associated with this disease. It can give a useful level of control of leaf blight (Botryotinia squamosa, anamorph Botryis squamosa). Useful reduction of Botrytis, Cladosporium, Stemphylium and Puccinia species can also be expected. Apply Fandango as part of a protectant programme, at any stage from when the leaf bases begin to thicken (BBCH 40, beginning of bulb formation) until when 10% of the leaves are bent over (BBCH 47). Apply in 100 to 300 litres water/ha.

Resistance Management:
Total reliance on one pesticide will hasten the development of resistance. Pesticides of different chemical groups or alternative control measures should be included in the planned anti-resistance strategy. This product should be used in conjunction with other fungicides from different cross-resistant groups [different mode of action, FRAC group] with satisfactory efficacy against the target. Fandango is a mixture of two fungicides with different modes of action, a strobilurin and a triazolinthione. Fandango contains fluoxastrobin, a member of the Qol cross-resistance group. Fandango should be used preventatively and should not be relied on for its curative potential.

Fandango contains Fluoxastrobin and Prothiaconazole
Fluoxastrobin is classed FRAC QoI group: 11
Prothiaconazole is classed within the FRAC DMI group: 3

IMPORTANT PLEASE NOTE:
Prior to the use of this product, growers should take advice from their crop advisors particularly in relation to the use of this product within an integrated crop management system of production.

There is limited evidence of crop safety and/or product efficacy available for this extension of authorisation for minor uses and the commercial risk of using this product on the crops/situations listed in this document is borne entirely by the grower.
