

## Udder health & responsible antimicrobial use

## Responsible choices

- Don't use 'Critically Important Antibiotics' as a first line of treatment
- If your herd is suitable, develop a selective dry cow strategy with your vet

## Take home messages

- ✓ Using antibiotics increases the risk of antimicrobial resistance
- ✓ Improving udder health reduces the need for antibiotics
- ✓ Check out RDP-funded "Dry Cow Consult" - see [www.cellcheck.ie](http://www.cellcheck.ie)

***"Use as little antibiotic as possible, but as much as necessary"***
