

Dairymaster Bulk Tank Sizes

They have 25 different tank sizes in three different profiles covering capacities from 5,550L to 30,100L, with the width and height of each profile fixed and the length varying with varying capacity.

1. The X range is the standard profile, from 9,750L to 22,000L and with a width and maximum height each 2.63m (just under 9 feet)
2. The Xn range is the narrow (but longer) shape, from 5,550L to 17,150L, and with a width and maximum height each 2.375m (just under 8 feet)
3. The Xs range is the wider (but shorter) shape, from 14,850L to 30,100L, and with a width and maximum height each 3.0m (just under 10 feet).

As a result of the three ranges, they have some flexibility in the shape of the tank for a given capacity, with the most common capacities covered by at least two, if not three possibilities. This allows a farmer to pick a shape which best suits his existing dairy.

See the page from the [SwiftCool manual](#) showing the dimensions of the tanks.
