Step 1  Consider

Is Organics an Option?
If you can answer yes to some or all of these questions then you should consider switching to organic production.

Crop systems
1. Can you incorporate a grass/clover break into your rotation?
2. Do you have a source of farmyard manure/slurry on or near your own farm?
3. Can you see yourself farming without relying on pesticides and chemical fertilisers?

Animal systems
1. Is your current stocking rate below 2 livestock units per Ha?
2. Can your animal housing be modified to incorporate a bedded lying area?
3. Are you in GLAS? Some GLAS measures eg. Traditional Hay Meadow, Low Input Permanent Pasture and Wild Bird Cover are not eligible for Organic Scheme payment.

Is Organic Farming Profitable?
Organic farming can be a profitable system of farming with some of the most profitable farmers in the country farming organically. Maintaining high output levels, coupled with lower production costs and premium market prices contribute to higher margins. In many cases the organic farming scheme payments are an added bonus.

Step 2  Investigate

1. Get accustomed with the adjustments required by attending farm walk(s), talking to other organic farmers and or contacting a local advisor.

2. Familiarise yourself with the Organic Standards.
A major factor distinguishing organic farming from other approaches to sustainable farming is the existence of internationally acknowledged standards and certification procedures. These standards have been developed to provide organic producers with consistent, clear rules as to how organic food should be produced. A two-year conversion period is required before a farm is given organic status.

Some of the main requirements are listed below:

Fertilisers and chemicals
- Soluble mineral fertilisers are prohibited, but some inputs such as lime and rock phosphate are permitted.
- Clover and other legumes supply nitrogen. The balance between fertility building crops, such as grass/clover ley and exploitative crops such as cereals and potatoes is critical in a tillage rotation.
- Most manufactured agro-chemicals (e.g. herbicides) are prohibited.

Animal welfare
- The highest standards of animal welfare are obligatory. Permission to carry our mutilations, bedding and generous floor space are required for housed animals.
- Ruminant stock must be fed a diet which is at least 60% roughage. Tillage crops should be considered as a cost effective alternative to buying in concentrates and bedding.
- Routine preventative treatment of healthy animals is not allowed, with a focus on prevention rather than cure.

Step 3  Choose an Organic Certification Body and get an application pack

The Organic Certification Bodies (OCBs) provide an inspection and certification service for all Organic Production Units in Ireland. They have been designated and are regulated by the Organic Unit of the Department of Agriculture, Food and Marine, and are responsible for upholding the organic standards as defined by the EU.

The OCB sends an information pack on request. The pack is tailored to the producers needs and will contain information on the application and conversion process, an application form and a guide to the Organic Standards. Once the application and conversion plan are received and assessed, an initial inspection will be arranged.

The OCBs carry out annual inspections of every organic enterprise. Further information can be sourced from these certification bodies:

Step 4  Complete a QQI Course in Organic Production

A 25 hour ‘Organic Farming Principles’ course must be completed before acceptance into the Organic Farming Scheme (OFS). For information and booking details on courses held nationwide go to: www.teagasc.ie/organics

Step 5  Application - Organic Farming Scheme and Grant -aid

SCHEME IS NOT OPEN FOR APPLICATIONS. Consult with DAFM re: next scheme opening period.

Step 6  The Conversion Process

When the initial inspection has been carried out, the application approved and the "in-conversion licence" granted, a period of conversion begins. Normally two years in duration, this period of conversion allows time for the land and producer to adjust to the

During the conversion period, the enterprise must adhere to all the Organic Standards concerning animal welfare, artificial fertilisers, pesticides and chemicals. The changes proposed in the conversion plan must be implemented during this period.

After the required conversion period expires, the inspection body may issue organic status to the farmer (unless conversion period is being extended), which allows the farmer to sell his/her produce as organic.
