

# Biobased Industries Joint Undertaking Demonstration Action Projects across Europe

A sustainable and competitive bioeconomy in Europe is key for the success of the EU Green Deal and the achievement of the EU's green recovery.

BBI JU projects contribute to this objective by structuring and mobilising the bio-based industry sector, boosting market uptake and supporting innovation. In this respect, the Biobased Industries Joint Undertaking (BBI JU) Demonstration Action projects (DEMOs) build demo-scale facilities in Europe at a size large enough to prove the technical and economical feasibility and to produce enough products to test the market. Between 2014 -2019, the BBI JU had funded 35 projects worth €250.5 million. The BBI JU Flagship projects (FLAGS) support the design, construction of first-of-their-kind commercial scale biorefineries in Europe. Between 2014-2019 10 projects €215.2 million of BBI JU funding have been provided for Flagship projects.

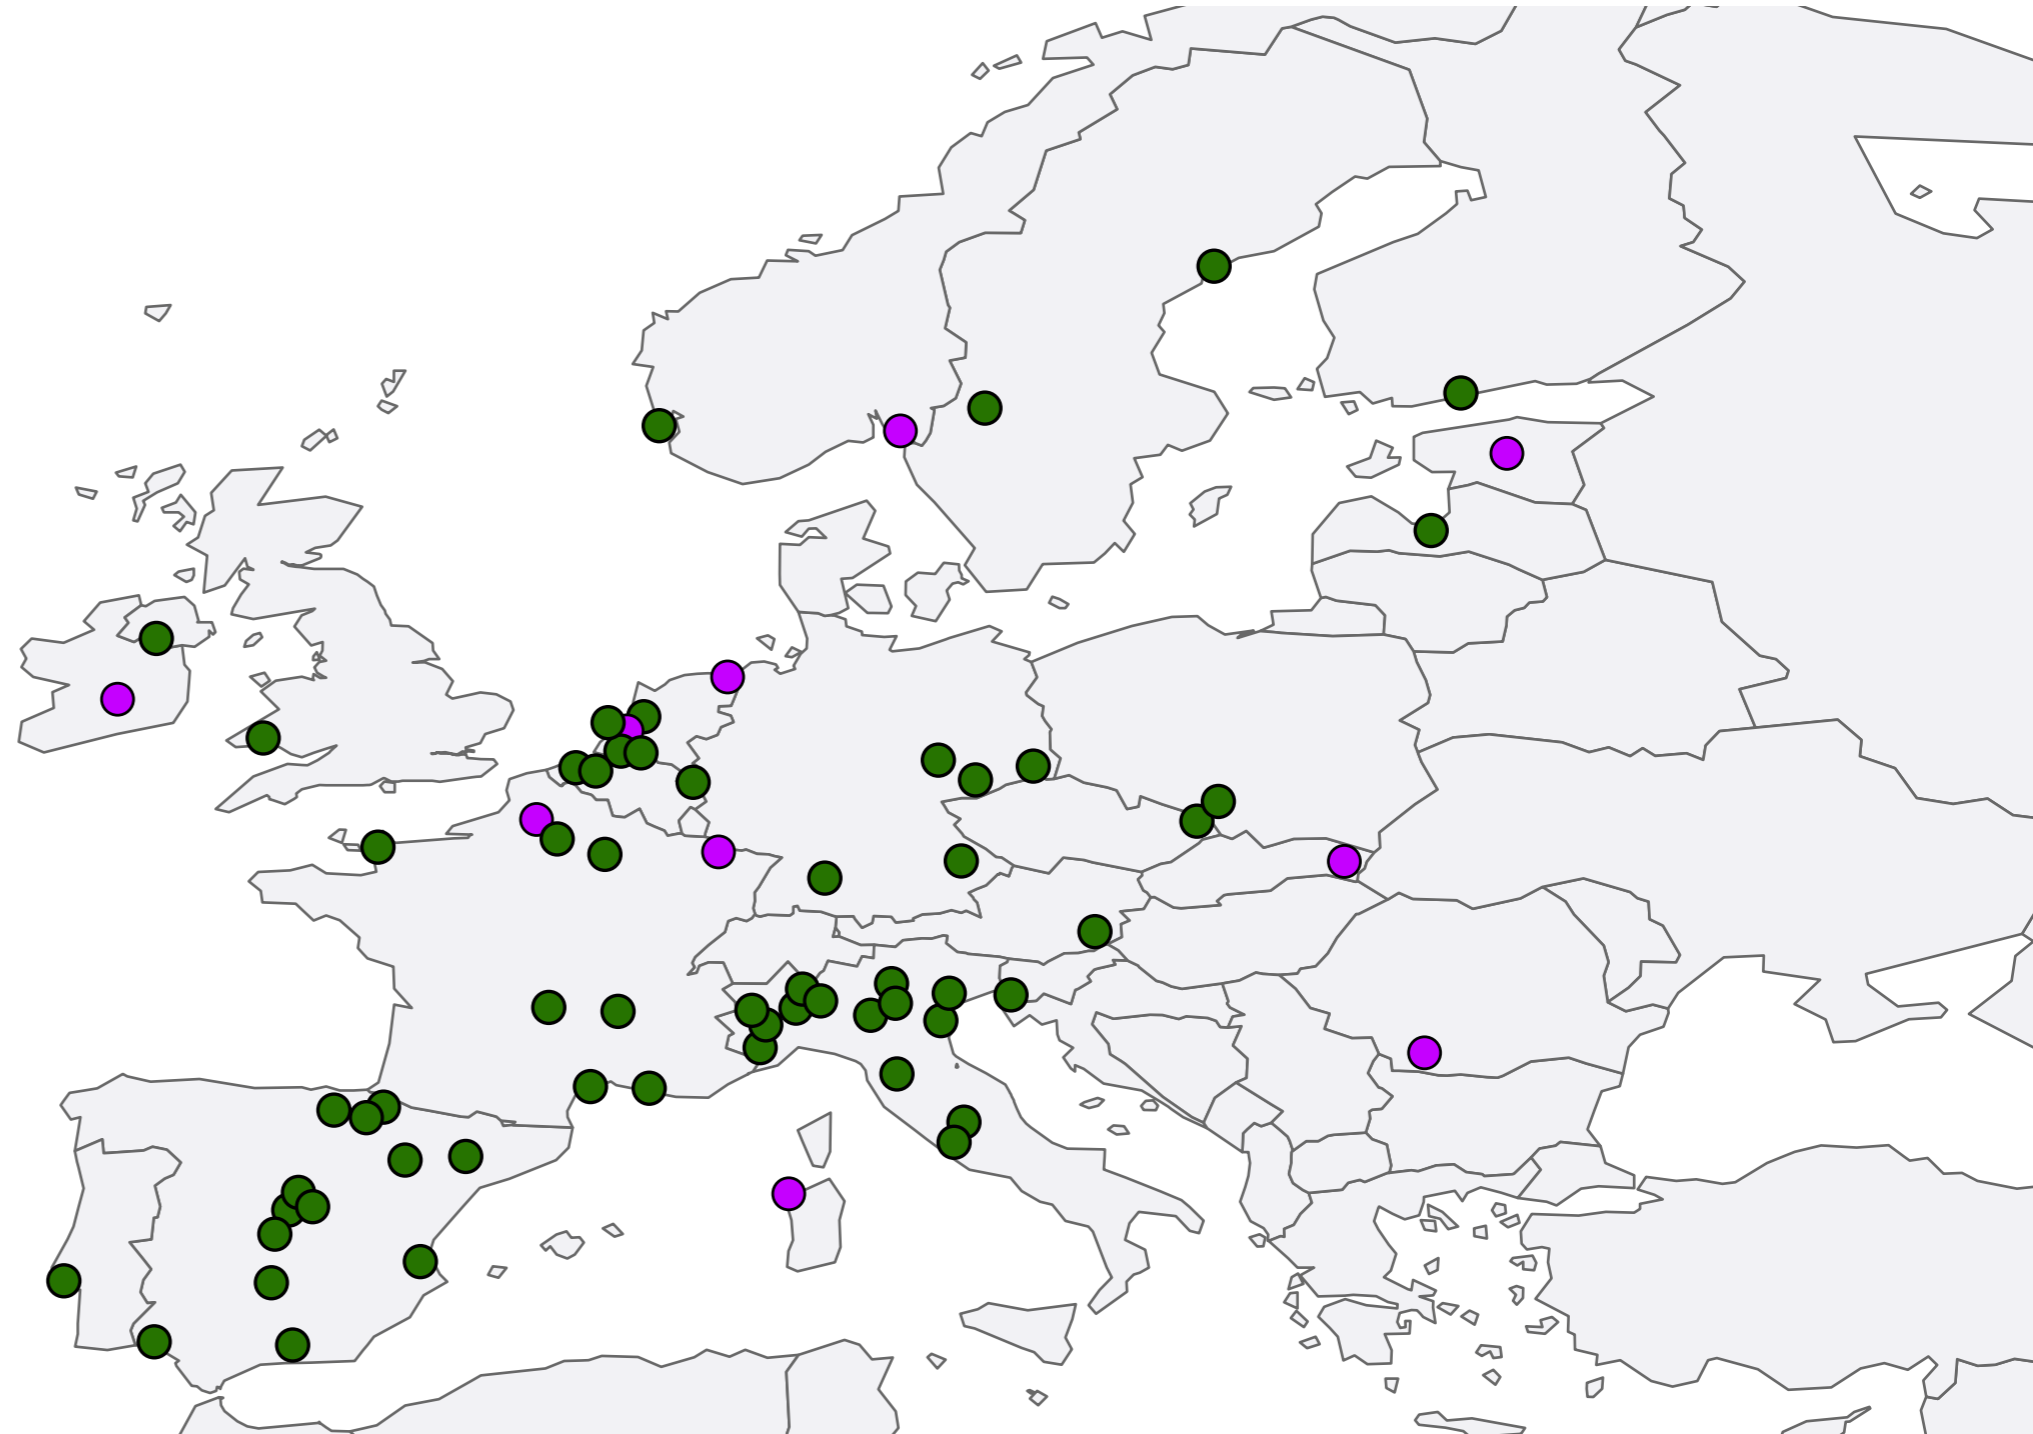

To illustrate, the Pilots4U project has set up a database of more than 260 open access pilot and multipurpose demonstration infrastructures for the European bioeconomy, helping innovators bridge the gap between laboratory developments and market introduction.
